<b>Office Action Summary</b>	<b>Application No.</b> 09/890,455	<b>Applicant(s)</b> INOUE ET AL.	
	<b>Examiner</b> Lynne A. Gurley	<b>Art Unit</b> 2812	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 13 July 2005.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 36-62 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 36-62 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

  
LYNNE A. GURLEY

PRIMARY PATENT EXAMINER

TC 2800, AU 2812

#### Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.

- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

### **DETAILED ACTION**

This Office action is in response to the amendment filed 7/13/05.

Currently, all new claims 36-62 are pending.

#### ***Drawings***

1. The drawings were received on 8/25/03. These drawings have been approved by the Examiner.

#### ***Specification***

2. The amendment filed 7/13/05 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: the limitation "bivalent copper ions" was not disclosed in the specification, claims or drawings, as originally presented

Applicant is required to cancel the new matter in the reply to this Office Action.

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

#### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it

Art Unit: 2812

pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 36-62 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Specifically, the limitation "bivalent copper ions" was not disclosed in the specification, claims or drawings, as originally presented.

5. In light of the preceding 35 USC 112 rejection, the prior art rejections remain as follows:

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 36-38, 43-46, 49, 51-52, and 57-60 (all new) are rejected under 35 U.S.C. 102(e) as being anticipated by Cheung et al. (US 6,258,233, dated 7/10/01, filed 7/9/99).

Cheung shows the method as claimed as depositing a seed layer in a feature of a substrate, depositing an electroless conductive layer conformally on the seed layer and electroplating a layer over the electroless layer to fill features on the substrate (column 3, lines 53-57). The electroless deposited copper layer fills defects and discontinuities in the seed layer

Art Unit: 2812

(column 2, lines 42-46). The seed layer and the electroless deposition layer are both copper and the copper sulfate in solution, which contains hydrogen and oxygen (copper sulfate produces dihydric copper ions in H<sub>2</sub>O as described in the specification of the instant invention) and disassociates into copper ions. A complexing agent of EDTA is used. An aldehyde acid is used – formaldehyde or glyoxylic acid. An organic alkali (TMAH) is used. (See column 3, lines 50-67 and column 4, lines 1-58.) The electroless deposition is performed at a rate of 400 Angstroms per minute (40 nm/min) (column 4, lines 54-55).

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

10. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any

Art Unit: 2812

evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

11. Claims 39-42, 47-48, 53-56 and 61-62 (all new) are rejected under 35 U.S.C. 103(a) as being unpatentable over Cheung et al. (US 6,258,233, dated 7/10/01) in view of Kikuchi et al. (US 4,563,217, dated 1/7/86).

Cheung shows the method as claimed and as described in the previous paragraphs.

Cheung lacks anticipation only in not teaching: 1) the details of the polyoxyethylene series surface active agent; 2) that the inlet size of the recess is less than 0.18 micron; 3) the concentration of copper ions from 0.01 to 10.0 g/L; 4) the concentration of the EDTA \* 4H being 0.5 to 100 g/L; 5) the glyoxylic acid concentration being 1 through 50 g/L and; 6) the pH being adjusted to a range of 10-14.

Kikuchi particularly shows, in a method using an electroless copper plating solution, details of the polyoxyethylene series surface active agent in the dependent claims. Also, the formation of cupric ions is reinforced by  $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$  in Kikuchi, as taught in the specification of the instant invention. Kikuchi also teaches the concentrations of the copper ions, the EDTA, the glyoxylic acid and the pH range.

It would have been obvious to one of ordinary skill in the art to have used the polyoxyethylene series surface active agent, and to have used the copper ions, the EDTA, the glyoxylic acid and the pH range as claimed in the method of Cheung, with the motivation that

Art Unit: 2812

these ranges are reasonable for an electroless plating solution, as taught by Kikuchi.

Additionally, it would have been obvious to one of ordinary skill in the art to have had an inlet size less than 0.18 micron, with the motivation that Cheung already shows deposition in a contact hole, so that the size of the opening being less than 0.18 micron as technology is scaling to the submicron ranges would be reasonable, especially in that the process taught in Cheung yields excellent, enhanced results for such a structure.

### ***Response to Arguments***

12. Applicant's arguments with respect to the previously presented claims have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

13. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

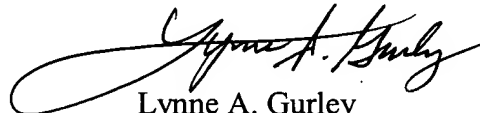

Art Unit: 2812

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lynne A. Gurley whose telephone number is 571-272-1670. The examiner can normally be reached on M-F 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Lebentritt can be reached on 571-272-1873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
